

LIX Film is the un-stretched film which the main material is linear low-density polyethylene (LLDPE). It is superior in foreign matter sealing property, hot tack property, cold tolerance, and bag tearing resistance.

FUTURE

L6101 has more heat resistance than general LLDPE, and it is possible to boil at 105 Celsius degrees or less.

It has tear resistance, and it is superior in cold tolerance and bag tearing resistance. It is superior in hot tack property and foreign matter sealing property.

USE

High boiling use etc.

General physical property of the LIX Film L6101 type
