anti-Taq high

TCP-101, 100 μL
(Correspond to 500 U Taq DNA polymerase)
Store at -20°C.

CAUTION
All reagents in this kit are intended for research purposes. Do not use for diagnosis or clinical purposes. Please observe general laboratory precautions and follow safety guidelines while using this kit.
[1] Introduction

Description
anti-Taq high is a highly purified neutralization monoclonal antibody to Taq DNA polymerase. This product provides an antibody-mediated hot start PCR to enhance the specificity and sensitivity of PCR. This antibody inhibits polymerase activity before the onset of thermal cycling, preventing primer dimer formation and non-specific amplification. At the first denaturation step of the thermal cycling, the antibody is quickly inactivated and PCR proceeds. The antibody-mediated hot start method is significantly more convenient to use than other hot start methods.

![Diagram of Taq DNA polymerase and Anti-Taq antibody action](image)

Fig. 1. Principle of Blunting by KOD DNA polymerase

Features
- Inhibits ≥95% polymerase activity at 45°C
- No contamination of mouse genomic DNA examined by PCR
- Enhances the specificity and sensitivity of PCR
- Can be used when other hot start methods are difficult to perform (e.g. capillary PCR)
- The polymerase can be reactivated quicker than with methods utilizing a chemically modified polymerase

[2] Components

<table>

*100 μL of anti-Taq high; corresponds to 500 U Taq DNA polymerase.
**<10 x PCR Buffer >
10 mM Tris-HCl(pH8.3), 500 mM KCl, 15 mM MgCl₂
**PCR Buffers supplied with purchased Taq DNA polymerases can be used instead of this buffer.

1. Preparation of polymerase-antibody mixture

\[
\begin{align*}
\text{Taq DNA polymerase*} & \quad 1 \text{ U} \\
+ & \quad \text{anti-Taq high} \quad 0.2 \mu\text{L}
\end{align*}
\]

or

\[
\begin{align*}
\text{Taq DNA polymerase*} & \quad (5 \mu\text{L}) \\
+ & \quad \text{Equal volume of anti-Taq high}
\end{align*}
\]

*Taq-based high efficient PCR enzymes can be used.
**The polymerase-antibody mixture can be stored for long term at -20 °C.

</table>

Note: Pre-denaturation step is not necessary on PCR cycling.

[4] Example

Example 1. Application of the hot start PCR using the Taq based high efficient PCR enzyme

The efficiency of anti-Taq antibodies were evaluated by the amplification of the human β-globin gene (3.6 kb). The result indicates that anti-Taq high increases the specificity and sensitivity of the PCR compared with the control reaction and PCR mediated hot start using company A's anti-Taq antibody.
